Art Unit: 1742

1. The Examiner has carefully considered Applicant's Response of 3/13/03. At this time, the Examiner makes a new rejection, stating his interpretation of the flux line limitation, and identifying how this limitation is met by the prior art.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3, 5, 8-23, 25 and 27-60 are rejected under 35 U.S.C. 102(b) as being anticipated by Toulmin, Jr.

Toulmin, Jr. discloses an apparatus for manufacturing a magnet from a magnetic powder comprising:

a movable upper punch (13);

a lower punch (11);

a cavity (15); and

an orientating device 18 for creating a magnetic field in the cavity.

If an axis is drawn vertically through the cavity, Fig. 1 discloses wherein the magnetic field creates zones in the cavity that are in some zones parallel to the axis and in other zones, less parallel to the axis, forming flux lines that extend relatively transversely compared to other flux lines extending through the cavity.

Art Unit: 1742

Toulmin, Jr. further discloses a coil (18) creating the magnetic field located near the sides of the cavity.

Toulmin, Jr. further discloses (see page 1, col. 2, lines 28-34) wherein at least one other coil (Toulmin, Jr. refers to these as "element(s)" (emphasis added by Examiner)) is used to create additional flux lines.

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 61-70 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claim 61 contains a limitation to "an orientating device that is at least partially positioned directly between the upper punch and the lower punch,". The Examiner finds no support for this limitation. In particular, the orientating device is fully positioned directly between the upper punch and the lower punch (see Fig. 19). The Examiner recommends the language --an orientating device that is positioned directly between the upper punch and the lower punch,--.
